COMMUNITY LEISURE UK

# Tackling Scope 3 Emissions and Promoting the Sustainability Agenda

WORKSHOP 3

October 2022

# Introductions

**Kirsty Cumming**  
CEO

**Rachel Sim**  
Project and Research Officer

**Robert Hatcher**  
Net Zero Expert  
[Robert.Hatcher@carbontrust.com](mailto:Robert.Hatcher@carbontrust.com)

**James Moore**  
Project Manager  
[James.moore@carbontrust.com](mailto:James.moore@carbontrust.com)

**Charlotte Sinden**  
Project Analyst  
[Charlotte.sinden@carbontrust.com](mailto:Charlotte.sinden@carbontrust.com)

# Today's Structure

## Section 1, Reducing Scope 3 Emissions

15:00 – 15:05

What is Scope 3?

(Refresh on Workshop 1)

15:05 – 15:15

Why tackle Scope 3?

15:15 – 15:40

Scope 3 Interventions

15:40 – 15:45

Promoting the Sustainability Agenda

15:45 – 15:50

Best Practice and Guidance

**15:50 – 16:00**

**Q&A**

# Workshop Information

- Today's session is being recorded and will be circulated after the session.
- Please post any **questions in the Slido chat**, like questions that you want us to prioritise.
- If we don't answer questions in the workshop, we'll circulate responses after the session.
- If possible, please fill out the feedback form after the session.

## Who we are

We are a trusted, expert guide to Net Zero, bringing purpose led, vital expertise from the climate change frontline. We have been pioneering decarbonisation for more than 20 years for businesses, governments and organisations around the world.

We draw on the experience of over 400 experts internationally, accelerating progress and providing solutions to this existential crisis. We have supported over 3,000 organisations in 50 countries with their climate action planning, collaborating with 150+ partners in setting science-based targets, and supporting cities across 5 continents on the journey to Net Zero.

OUR MISSION

**To accelerate the move to  
a decarbonised future.**

Workshop 3

# Scope 3

Refresh on Workshop 1

# Reporting Categories

**Scope 1**  
*Direct*

- Owned transport
- Fuel combustion
- Process and fugitive emissions

**Scope 2**  
*Indirect*

- Purchased electricity
- Purchased heating / cooling

**Scope 3**  
*Indirect*

	Upstream					Downstream				
Purchased goods & services	Waste from operations	Fuel & energy related activities	Business travel	Downstream leased assets	Downstream transport & distribution	Franchises	End of life treatment			
Capital goods	Upstream transport & distribution	Upstream leased assets	Employee commuting	Investments	Processing of sold products	Use of sold products				

# Scope 3

Scope 3, indirect emissions associated with upstream and downstream activities

# Scope 3

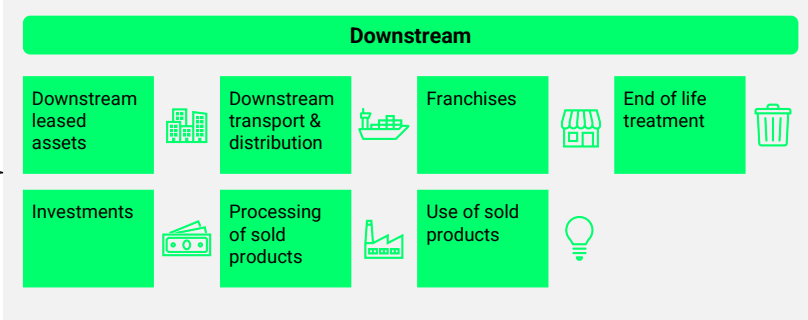

- Purchased goods and services
- Waste Management
- Leased services
- Employee travel
- Well-to-tank emissions
- Aviation

# Scope 3

Buildings leased to others

Processing of sold products

Workshop 3

# Why Tackle Scope 3?

# Headlines: Scope 3

**Cycling growth in UK at risk of being left behind by Europe, experts warn**

Bicycle sales down by a quarter on pre-pandemic levels and electric bike takeup also stalling after a boom

**Transport emissions are biggest threat to UK net zero as figures show huge drop in lockdown**

Campaigners say £27bn on new roads threatens progress after sharp fall in emissions in lockdown

**Electric vehicles bring down CO2 emissions of new cars in UK to lowest level ever**

Though only 12% of new sales were zero-exhaust electric vehicles, emissions fell by 11.2% in 2021

Transport

**Veganism is 'single biggest way' to reduce our environmental impact, study finds**

**M&S scraps 'best before' dates on fruit and veg to cut food waste**

Food

**Greenhouse gases: waste and recycling rates 'could stop UK net zero goal'**

Exclusive: experts tell government without action stagnating recycling rates and waste incineration will impede 2050 target

Waste & Recycling

# Why do Scope 3 emissions matter?

**A large proportion of emissions are frequently within Scope 3**

*Supply chain emissions can be as much as 80% of your total emissions in some sectors*

**Enables you to target policies and interventions that might have a more significant impact**

*e.g. promoting sustainable transport to events*

**Interventions can be low cost/free in many instances**

**Action promotes your sustainability agenda to members and suppliers**

**'Ripple effect' – ability to use your platform for good, helping members to take sustainable decisions**

# Challenges in Measuring S3

## Data Quality

- No data
- Missing data
- Unknown data quality
- Assumed data
- Poor data storage

## Insufficient Expertise

- Lack of expertise
- Insufficient resource

## Motivation

- No ownership
- Achieving senior level buy-in
- Not understanding the benefits

slido

**Do you measure your scope  
3 emissions?**

① Start presenting to display the poll results on this slide.

Workshop 3

# Scope 3 Interventions

# Section Structure

1. Business Travel and Commuting
2. Travel to Venue
3. Lifecycle Emissions
  - i. Food and Drink
  - ii. Plastic waste
  - iii. Textiles
4. Leased Assets
5. Supply Chain Engagement
6. Carbon Offsets

# Section Structure

1. Business Travel and Commuting
2. Travel to Venue
3. Lifecycle Emissions
  - i. Food and Drink
  - ii. Plastic waste
  - iii. Textiles
4. Leased Assets
5. Supply Chain Engagement
6. Carbon Offsets

**Travel during work (e.g. meetings, international travel), is typically expensed by the company**

Data examples: £ spent per mode, mileage claims, distance by mode.

## Business Travel

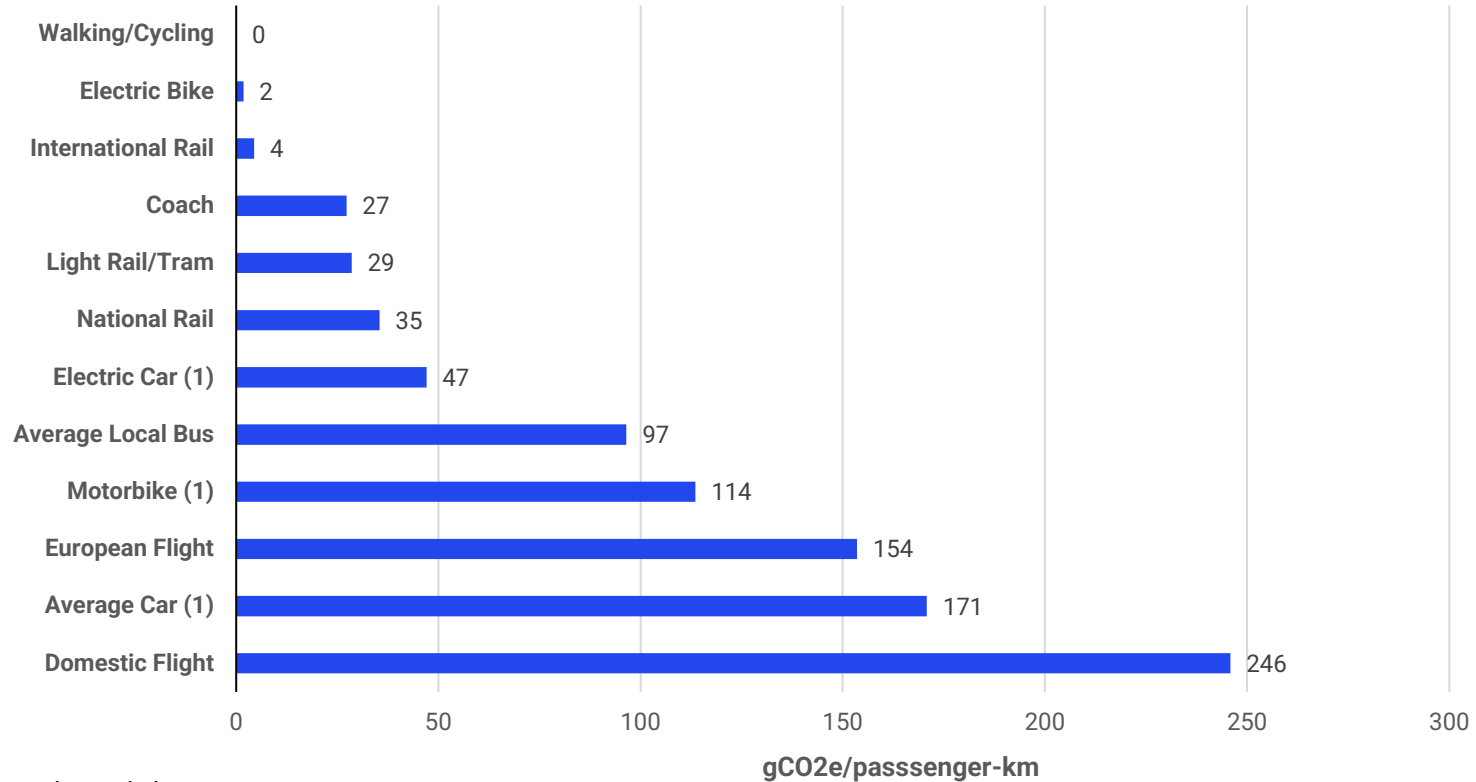

**Travelling to work and (optionally) additional emissions from home-working**

Data examples: Travel to Work survey, workplace occupancy levels, staff car park occupancy levels...

## Commuting

# Emissions by Mode

1 – Assumed to only have 1 person

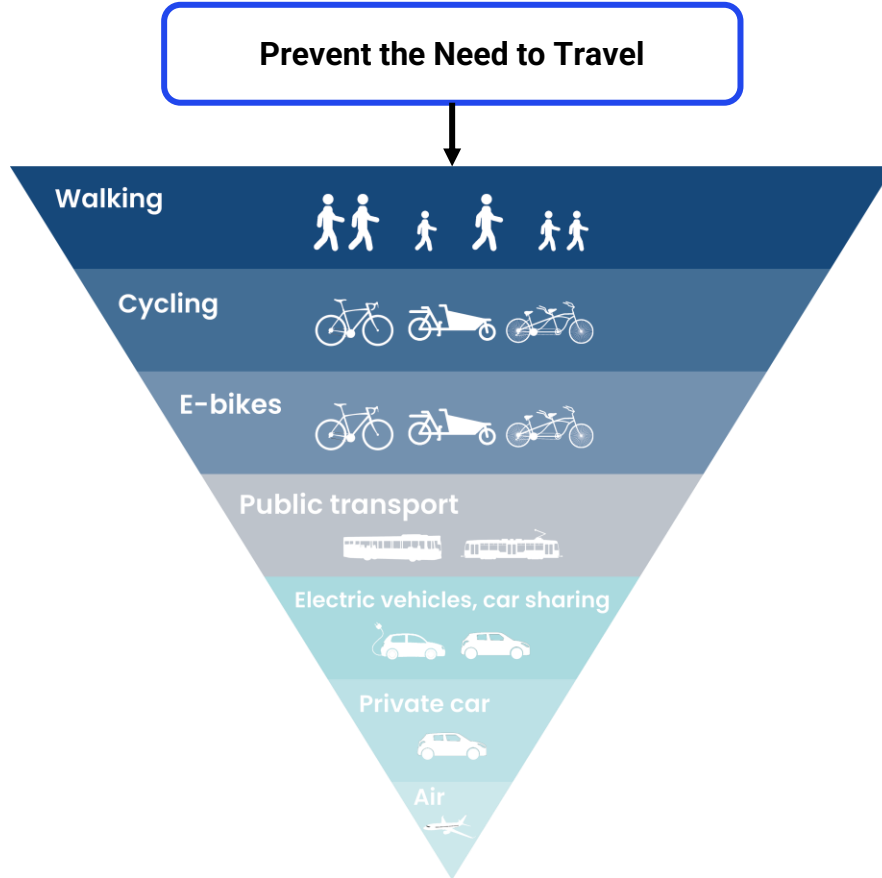

slido

**How do you get to work  
most of the time?**

ⓘ Start presenting to display the poll results on this slide.

# Transport Hierarchy

# Potential Policies

Support cycling to work through secure cycle parking facilities and showers

Removal of diesel/petrol vehicles from company car scheme (also has significant BIK savings)

Allow employees to claim mileage for journeys made through cycling, preferably exceeding the price paid for car journeys

Purchase of EV vehicles and introduction of EV only car parking spaces with charging points. Allow employees to purchase a personal EV through salary sacrifice.

Support the Cycle to Work scheme, allowing employees to purchase a bike in a tax-efficient way

# Potential Policies

**Ban flights on some routes (e.g. London -> Edinburgh) or require justification for flying**

**Help to spread the cost of public transport season tickets with a season ticket loan**

**Introduction of car parking charges, these could be used to subsidise other projects**

**Car share scheme, could be delivered through a database or group chat**

**Encourage working from home, where possible**

# Hybrid Working: Considerations

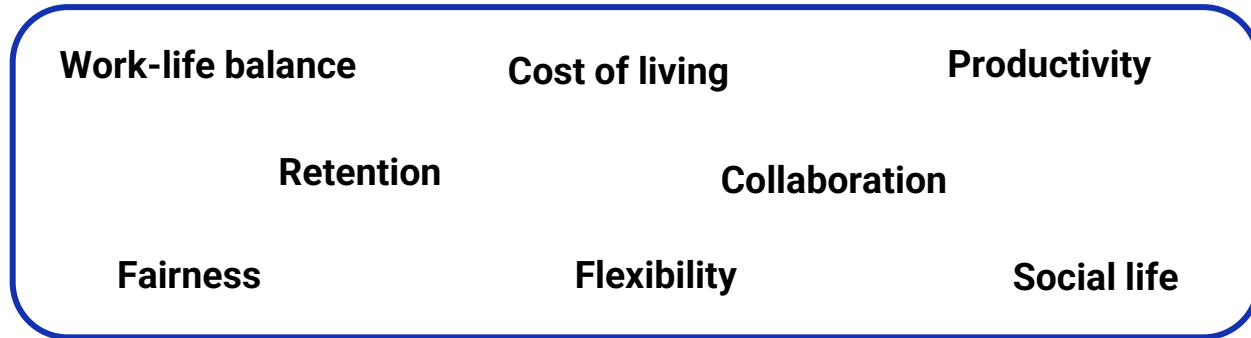

**Environmental Considerations**

**Remote Working**  
Lower commuting emissions

**In-Person Working**  
Lower heating emissions  
(significant in the winter)

**Other Considerations**

# Hybrid Working: Recommendations

The landscape of remote working can be a tricky one to navigate, particularly in the leisure and culture sector where some staff are unable to complete their job remotely.

## How do colleagues travel to/from work?

- i. Consider the transport emissions saved/caused as result of different hybrid working policies

## Do policies lead to a net increase in heating demand?

- i. Consider implementing different policies during the winter when emissions from homeworking are likely to be significantly more
- ii. Can downsize office space and therefore energy use due to a lower occupancy?

But importantly, policies should work well for all staff, with any changes should be clearly communicated.

# Section Structure

1. Business Travel and Commuting
2. Travel to Venue
3. Lifecycle Emissions
  - i. Food and Drink
  - ii. Plastic waste
  - iii. Textiles
4. Leased Assets
5. Supply Chain
6. Carbon Offsets

# Travel to Venue

No one wants reduced travel to mean reduced visitors, a range of interventions can be implemented to incentivise visitors to make more sustainable choices.

1. A survey of visitors can gather data about current practice, providing a baseline
2. Clear information about sustainable travel options through marketing, ticket sales and/or your website
3. Reducing car parking provision over time
4. Use local contractors where possible

For theatres:

5. Reduction of ticket costs for use of public transport
6. For visiting artists, provide accommodation close to rehearsal spaces/venues
7. Consider employing local freelancers and cast members

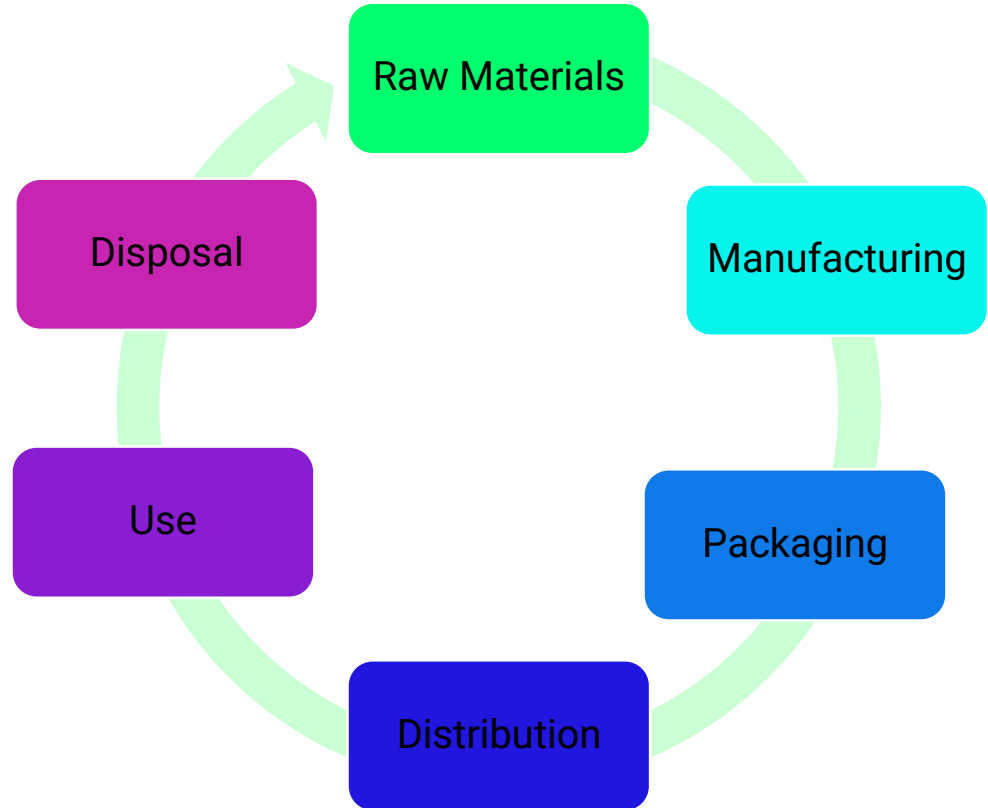

# Section Structure

1. Business Travel and Commuting
2. Travel to Venue
3. Lifecycle Emissions
  - i. Food and Drink
  - ii. Plastic waste
  - iii. Textiles
4. Leased Assets
5. Supply Chain Engagement
6. Carbon Offsets

# Cradle to Grave

*Total emissions from creation to disposal; throughout the full life-cycle.*

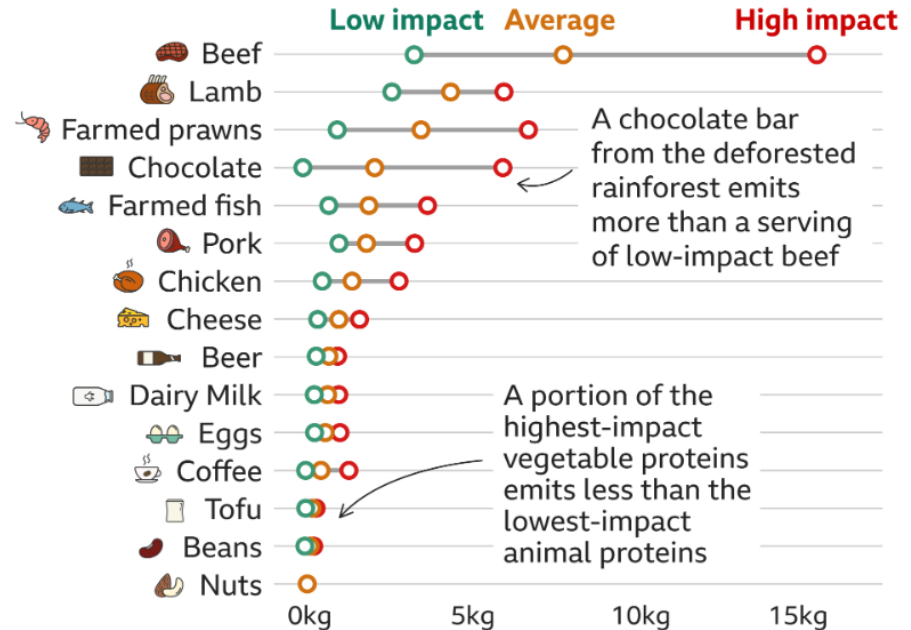

# Food: Sustainable Choices

1. Could you lower the content of meat dishes? One study found that diners didn't notice a 28g cut in meat<sup>1</sup>
2. Could you add more vegetarian or vegan dishes to your menu?
3. Could you make vegetarian options sound more appealing?
4. Could you make vegetarian options more prominent?
5. Could you work with suppliers to seek to source food that is more locally sourced?

Emissions per Food Type (kgCO<sub>2</sub>e/kg)<sup>2</sup>

1- Menu-engineering in restaurants - adapting portion sizes on plates to enhance vegetable consumption: a real-life experiment, <https://ijbnpa.biomedcentral.com/articles/10.1186/s12966-017-0496-9>

2- Reducing food's environmental impacts through producers and consumers, <https://www.science.org/doi/10.1126/science.aag0216>

# Food: Case Studies

## ***Veg Nudge<sup>1</sup>***

94,000 cafeteria meal choices were analysed at the University of Cambridge

Increasing vegetarian options from 1 in 4 (25%) to 1 in 2 (50%) increased plant-based purchases by 40-80%

➤ **Overall food sales were not affected**

**UNIVERSITY OF  
CAMBRIDGE**

## ***Menus for Climate-friendly Food Choices<sup>2</sup>***

When carbon labelling for foods (i.e. high, medium and low emissions) was available, participants chose more climate-friendly dishes.

➤ **The impact was 200gCO<sub>2</sub>e less per meal**

If standard options were vegetarian options (i.e. a vegetable patty), significant emission savings were achieved

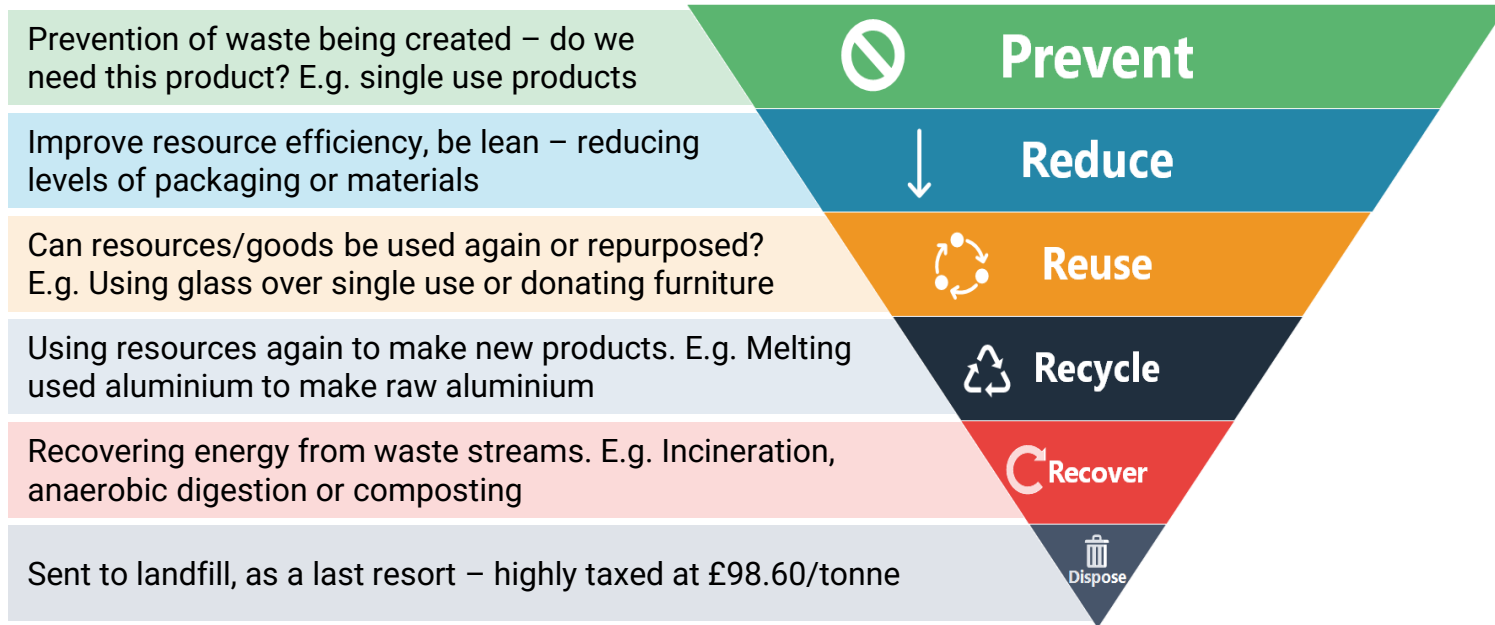

➤ **The impact was 300gCO<sub>2</sub>e less per meal**

1- Veg Nudge - <https://www.cam.ac.uk/veg-nudge>

2- Menus for climate-friendly food choices, <https://www.uni-wuerzburg.de/en/news-and-events/news/detail/news/karten-tricks-fuer-klimafreundliches-essen/>

# Waste Hierarchy

## Food: Waste

**60,000 tonnes**  
of food waste is  
generated  
annually by  
Leisure

It's estimated  
that **68%** of this  
waste is  
avoidable

This costs the  
UK Leisure  
sector an  
estimated  
**£240m annually**

# Food: Waste

1. **Measure** – quantification of waste quantity and waste source. E.g. split into bins by source, “spoilage,” “Prep” and “plate waste” and measured daily manually or through a ‘smart’ bin.
2. **Engage Staff** – Guidance and support should come from leadership through meetings, conversations, training etc. Create an environment where staff are rewarded for measuring and reducing waste.
3. **Reduce Overproduction** - tracking production and waste consistently helps identify waste hotspots. Batch cooking, casserole trays and buffets tend to overproduce food – moving away from these preparation methods can save much more money through waste reduction.
4. **Rethink inventory and purchasing practices** – consider making deeper adjustments to inventory or purchasing practices to further streamline standard operating procedures. Examples might be improving delivery schedules or restructuring inventory management.
5. **Repurpose excess food** – extra ingredients can be repurposed for a rotating menu slot (special/soup of the day) and if still edible, donated to organisations that can distribute to people in need.

## Plastic: Waste

**Over 2m tonnes**  
of plastic waste  
is generated by  
the UK each  
year

70% of plastic  
packaging is  
**reusable or  
recyclable**

Average  
**recycled  
content is 18%**,  
doubling from  
9%, just 3 years  
ago

# Plastic: Waste

1. **Reduce single-use plastics** – encourage visitors to use their own bottles at water foundations
2. **Reduce packaging** – ensure suppliers don't individually wrap items where it isn't necessary, shop locally where you can and vote with your buying power
3. **Circular reuse** – if cups are absolutely necessary, consider implementing a deposit scheme
4. **Reuse equipment** – when replacing equipment, consider how you might be able to share equipment with others or sell it
5. **Reduce demand** – consider plastic items that you frequently purchase and research for available alternatives on the market
6. **Recycling facilities** – clearly label and segregate your waste at source into separate bins

# Plastic: Pool Waste

Pool waste that would normally be discarded into landfills, can now be collected, recycled and reformed into new products for the leisure industry.

Each site receives a reusable 100L recycle point that they can fill with pool waste such as flip flops, goggles, floats, armbands, kickboards, pull buoys & swim caps.

100% of waste is recycled into new products made in the UK – these can be sold in your shop!

**£150** for first recycle point

**£60** for repeat collection fee

<https://ecoleisuresupplies.com/leisure-loop-recycling-scheme>

## Textiles

Responsible for  
**1.2 bn tonnes of emissions**  
globally – **10%**  
of the global  
total

The fashion  
industry is **2<sup>nd</sup>**  
**most polluting**  
industry, behind  
only oil and gas

Current water  
use of **32**  
**million Olympic**  
**swimming**  
**pools** and set to  
rise by **50% by**  
**2030**

# Textiles: The Challenge

1- Fashion and the circular economy - <https://archive.ellenmacarthurfoundation.org/explore/fashion-and-the-circular-economy>

# Textiles: Policies

You can **positively influence** your visitors and minimise the amount of clothing wasted by considering the following interventions:

1. **Materials**, Use natural fibers (where possible)
2. **Durability**, ensure clothes are of high quality
3. **Promote sustainable brands**, through your shops
4. **Stock less items**, minimising your need to run sales
5. **Vintage**, consider purchasing vintage items
6. **Recycling**, allow customers to return clothing, it can then be recycled according to its quality

# Section Structure

1. Business Travel and Commuting
2. Travel to Venue
3. Lifecycle Emissions
  - i. Food and Drink
  - ii. Plastic waste
  - iii. Textiles
4. Leased Assets
5. Supply Chain Engagement
6. Carbon Offsets

# Leased Assets

When leasing a building or part of a building to another company, these emissions should be reported under Scope 3. Since you have financial control over the building, efforts should be taken to minimise its environmental impact

1. Building fabric upgrades
2. Use of sensors and switches to improve efficiency
3. LED lighting
4. Complimentary energy efficiency information provided to tenants
5. Installation of sub-meters to that tenants can monitor energy use

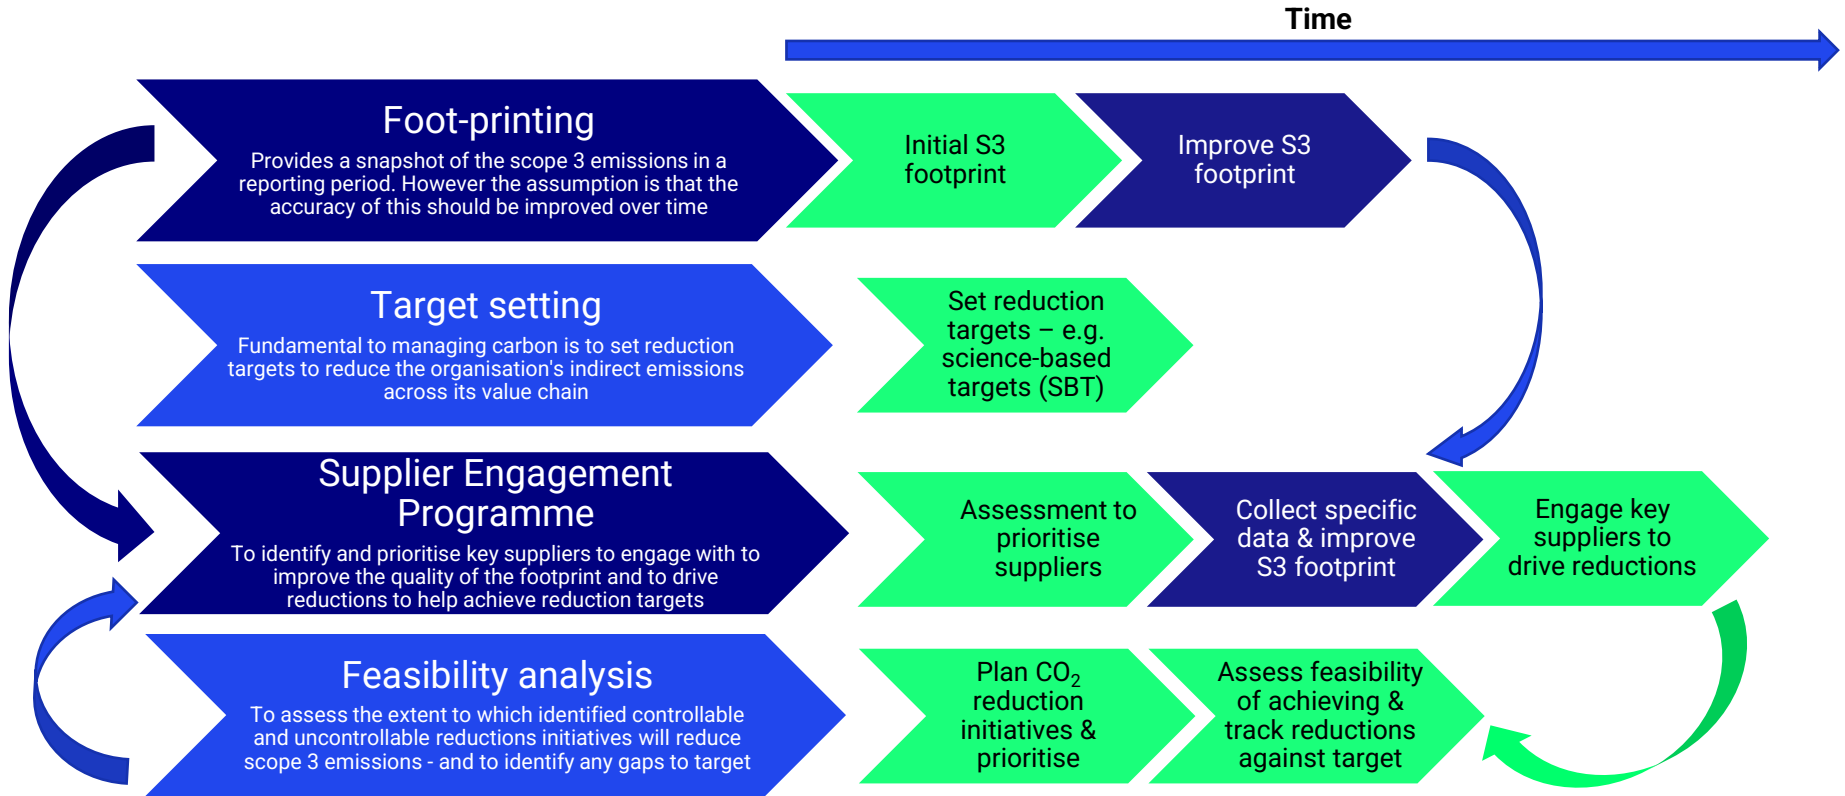

***See Workshop 2 for further guidance on energy-saving features***

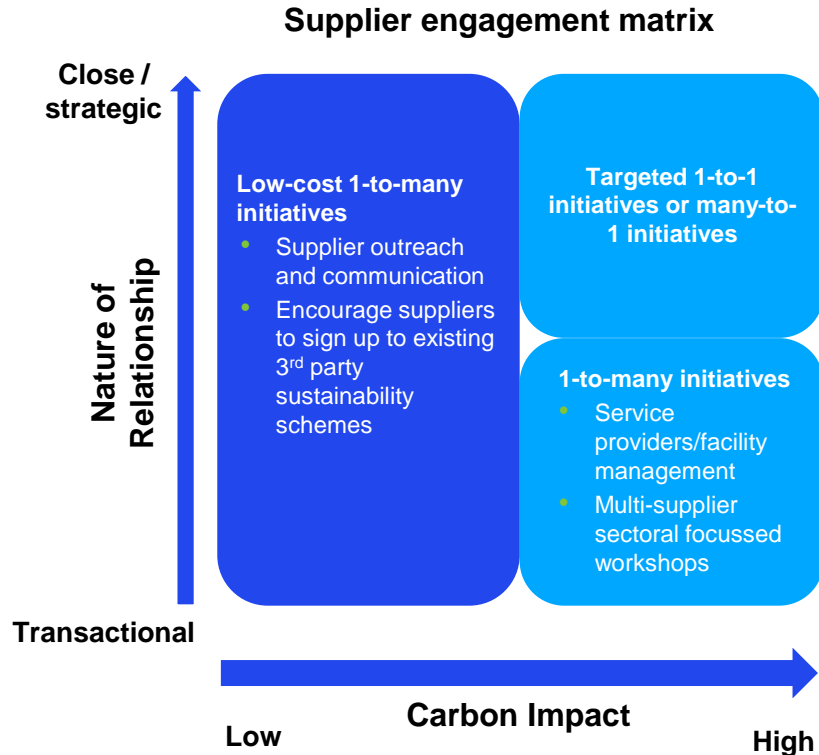

# Section Structure

1. Business Travel and Commuting
2. Travel to Venue
3. Lifecycle Emissions
  - i. Food and Drink
  - ii. Plastic waste
  - iii. Textiles
4. Leased Assets
5. Supply Chain Engagement
6. Carbon Offsets

# Managing supply chain emissions requires action on multiple workstreams over time

# Supply Chain Engagement Approaches

- **Supplier engagement matrix** to guide the engagement approaches with suppliers.
- Conduct **targeted 1-to-1 engagements** with a small group of key suppliers
- For suppliers that have a lower individual impact, **1-to-many approaches** can be pursued
  - Outreach & comms regarding guidance and encouragement to sign up to best practice standards (e.g., [Carbon Trust Route to Net Zero Standard](#)).
- Hybrid approaches also possible such as running sessions for multiple suppliers
- Conduct supplier engagement workshops that encourage collaboration and sharing of best practice approaches on low carbon.

# Supply Chain Procurement Practices

## Pre-procurement

- Soft market testing to understand suppliers' ability to meet Net Zero.

## Specifications

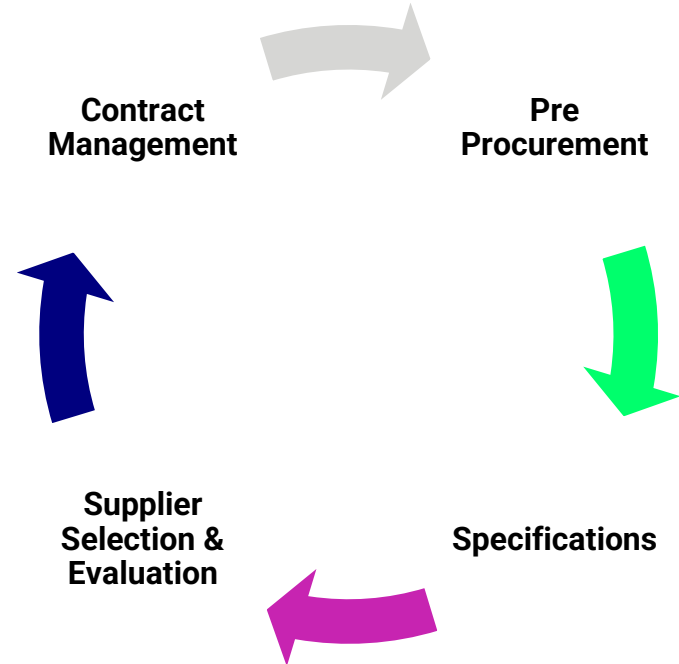

- Develop Net Zero aligned parameters within specifications that quantitatively outline carbon expectations

## Supplier selection and evaluation

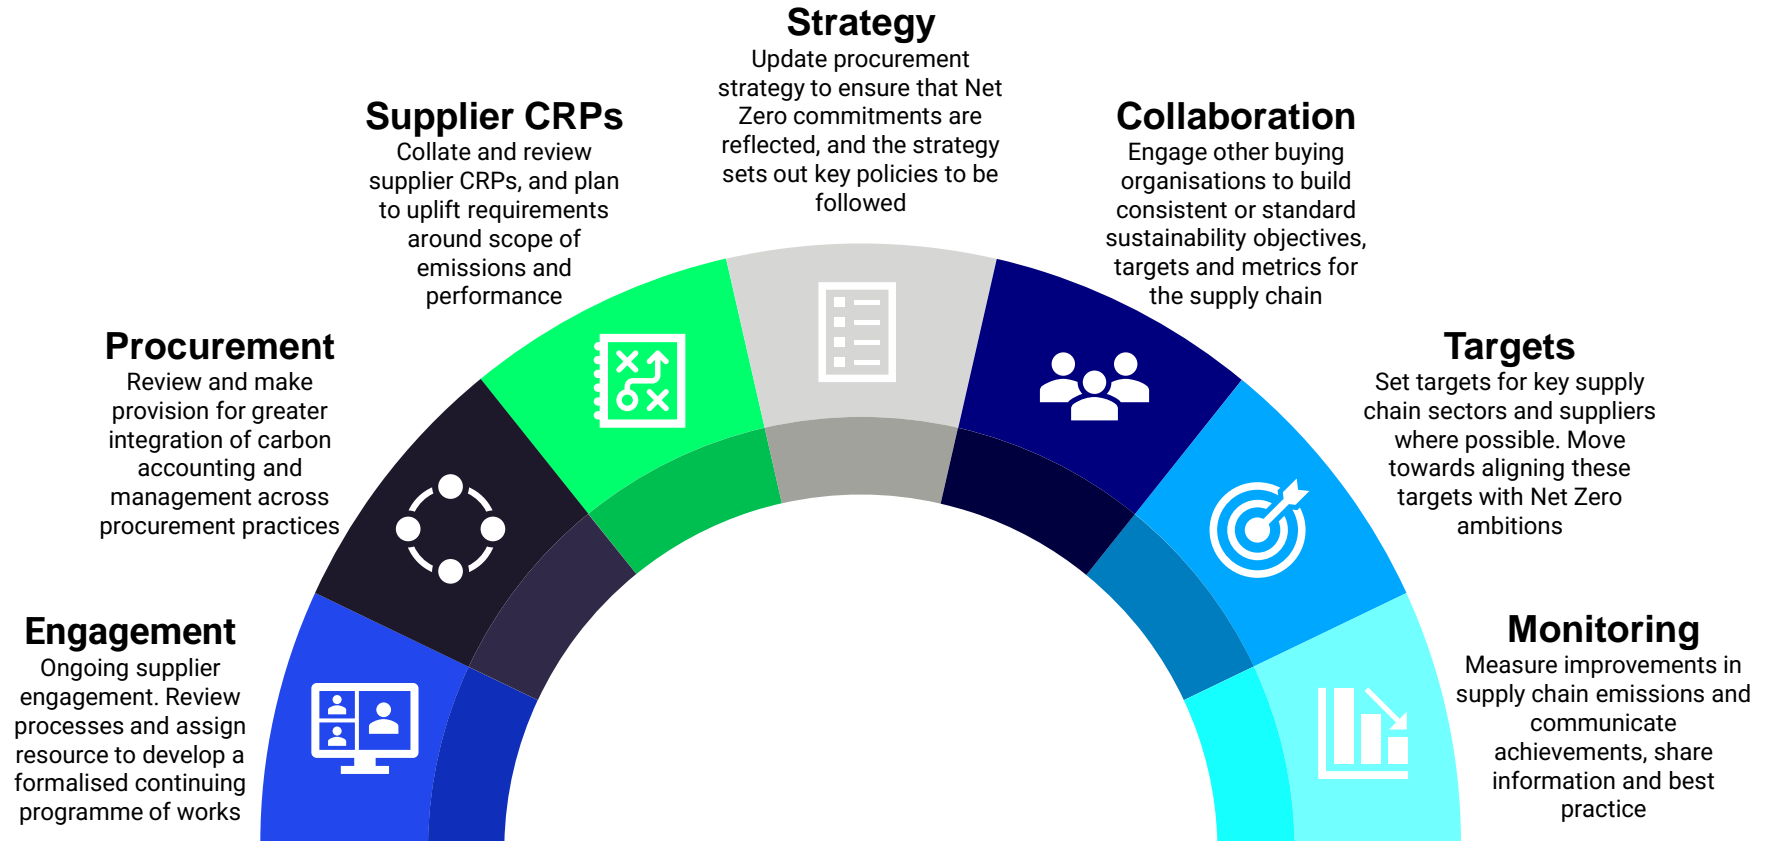

- Request supplier information on suppliers carbon management and evaluate submissions in terms carbon performance

## Contract management

- Make use of KPIs (developed for specifications) within the contract review processes

# Supply Chain Action

# Section Structure

1. Business Travel and Commuting
2. Travel to Venue
3. Lifecycle Emissions
  - i. Food and Drink
  - ii. Plastic waste
  - iii. Textiles
4. Leased Assets
5. Supply Chain Engagement
6. Carbon Offsets

# Carbon Offsets: Types

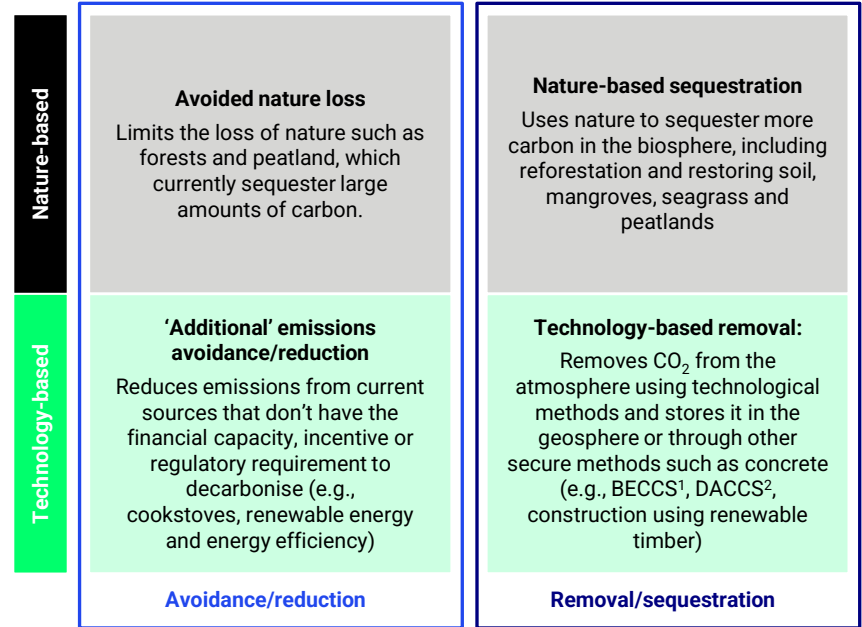

There are broadly two different types of offsets available on the market:

## Nature-based

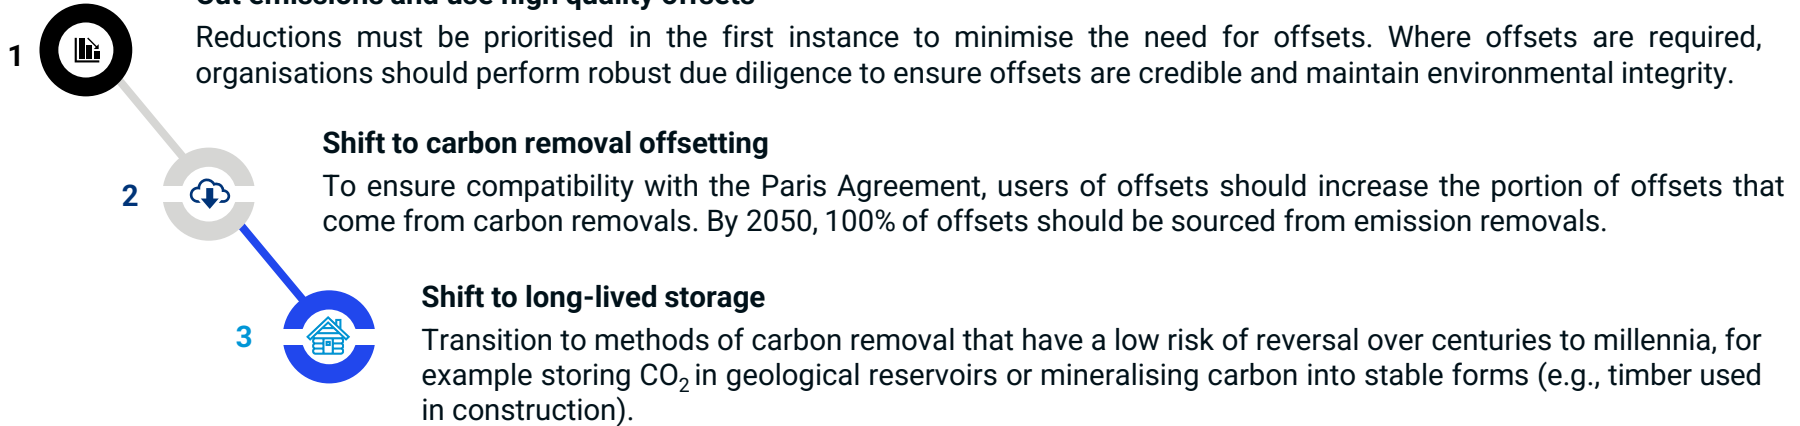

- Avoided nature loss (e.g. protecting peatlands and forests)
- Nature-based sequestration (e.g. reforestation and repairing peatlands)

## Technology-based

- Avoided emissions (e.g. renewable energy, upgraded heat stoves)
- Technology-based removals (e.g. direct air capture)

# Carbon Offsets: Approach

Carbon offsets vary significantly in their quality and accountability

- Almost three quarters of credits issued are either nature-based solutions or renewable energy.
- Concerns over the additionality of renewable energy projects and competing land use for nature-based solutions are often raised and have to be managed carefully, particularly as the voluntary offset market grows globally.

Workshop 3

# Promoting Sustainability

# Promoting a Sustainability Culture

Once you start on your sustainability journey, it is vital that you engage colleagues to share ideas and encourage contributions from all levels.

- Creation of a *Green Team* with members from all parts of your organisation
- Provide carbon literacy training for all employees. Appropriate training and strategies to engage people within your organisation will also have an impact on operational carbon reduction.
- Provide sustainability induction for new starters. This could be as simple as a list of your Green-Team members, scheduled meetings, sustainability goals, current actions and plans for the future.
- Include sustainable roles and objectives within new employment contracts

# The Role of Leisure and Arts

The creative and leisure community is uniquely placed to transform the conversation around climate change and translate it into action.

- Artists and the wider cultural community deal with the art of the possible and influence new ways of being, doing and thinking.
- Arts and culture not only respond to the world around us, they also influence our individual and collective experiences, and shape the direction we take.
- A unique platform from which to engage and inspire action on climate change.
  - Can take a complex idea and present it in ways that are both engaging and inspiring
- What does the future of leisure look like in a warming world?
- Environmental sustainability is also intrinsic to the resilience of leisure and cultural organisations and makes economic as well environmental sense.

Show Your Stripes: Ed Hawkins
